Pestech bags EPCC job worth RM50m in the Philippines

BY TAN XUE YING

KUALA LUMPUR: Pestech International Bhd said its unit has been awarded an engineering, procurement, construction, and commissioning (EPCC) contract for a new 230kV outdoor power substation in the Philippines, at a contract sum of about RM50.17 million.

Under the contract, Pestech will deliver a new 230kV outdoor substation — the Calamba 230kV main substation — to serve the Laguna province of Luzon Island, which is about 60km away from

the Manila International Airport.

In a filing with the local stock exchange, Pestech said its wholly-owned unit Pestech Sdn Bhd received a notification of award yesterday from the Philippines-based utility company National Grid Corp of the Philippines (NGCP) to undertake the job.

Pestech said the job entails the design, supply, installation, testing and commissioning of secondary devices for the power substation, including the construction, erection or integration of NGCP-supplied high voltage equipment, over 540 days.
